

Media Statement from Silfab Solar (September 30, 2026)

In satisfying the components of Silfab's agreement with the South Carolina Department of Environmental Services (DES), Silfab has submitted the engineering report of TRC Engineering, an independent third-party engineering firm retained to evaluate Silfab Solar chemical processes, incident response protocols, and emergency response procedures at its Fort Mill facility.

The report completes a significant milestone in Silfab's voluntary compliance agreement with DES. Along with the report, Silfab submitted an addendum outlining the actions the company has taken in response to TRC's recommendations, a schedule of the process going forward and reaffirmed its commitment to safe operations in York County.

Silfab's ongoing commitment to transparency includes making the TRC report publicly available at www.silfabsolarsc.com. The company aims to provide York County residents, community leaders, and other stakeholders with a clear understanding of this independent assessment, the improvements and enhancements for implementation, and the redundant safeguards in place to support safe and responsible operations. Every day, Silfab commits to meet the highest standards for safety and environmental stewardship on behalf of its employees and the community.

The schedule provided by Silfab outlines the plan, including pre-commissioning and commissioning activities and specifies that 72-hour notice will be provided by the Company prior to commencement of commissioning activities no sooner than October 18th.

Silfab Solar remains dedicated to continuous improvement, operational safety, environmental stewardship, and the responsible re-shoring of domestic solar manufacturing that supports America's critical energy needs.
